Despite the frigid weather in much of the U.S., the powersports industry has maintained steady sales through February by leaning on ATV and side-by-side units. Dealers across the U.S. report that utility levels are running low due to a higher, sustained volume of sales over the last year.

Surveyed dealers feel that sportbikes continue to be the worst selling unit type in their inventory -- a trend in opinion continuing since September of 2013.

Dealers are also reporting that there has been a notable increase in new unit motorcycle over used motorcycle sales; this has lead to the depletion of non-current year new units from retail locations. Dealers state that the majority of new units on their lots are 2014 models.

As the industry heads into the spring season, NADAguides anticipates a greater move toward new unit sales causing the used market to soften slightly.

The NADAguides powersports data is based on national averages; however, our analysts recognize the significance of regional variance by unit type. The following charts represent consumer traffic based on four regions. Traffic percentages for 2013 are offered as a comparison to the January 2014 traffic.
Fuel Price Data

A view of the national average gasoline prices and year-over-year change is supplied to provide support for longer-term strategic planning.
A number of important economic factors affect the powersports market, including the unemployment rate, retail sales, the housing market, and the Consumer Price Index (a measure of inflation). These factors can be interpreted to represent the consumer’s ability and willingness to make a new or used motorcycle or ATV purchase.
